

AQUILA

Aquila, "the eagle," is the keeper of Zeus' lightning bolts and has the ability to make rain. Aquila can be seen through the glowing band of the Milky Way.

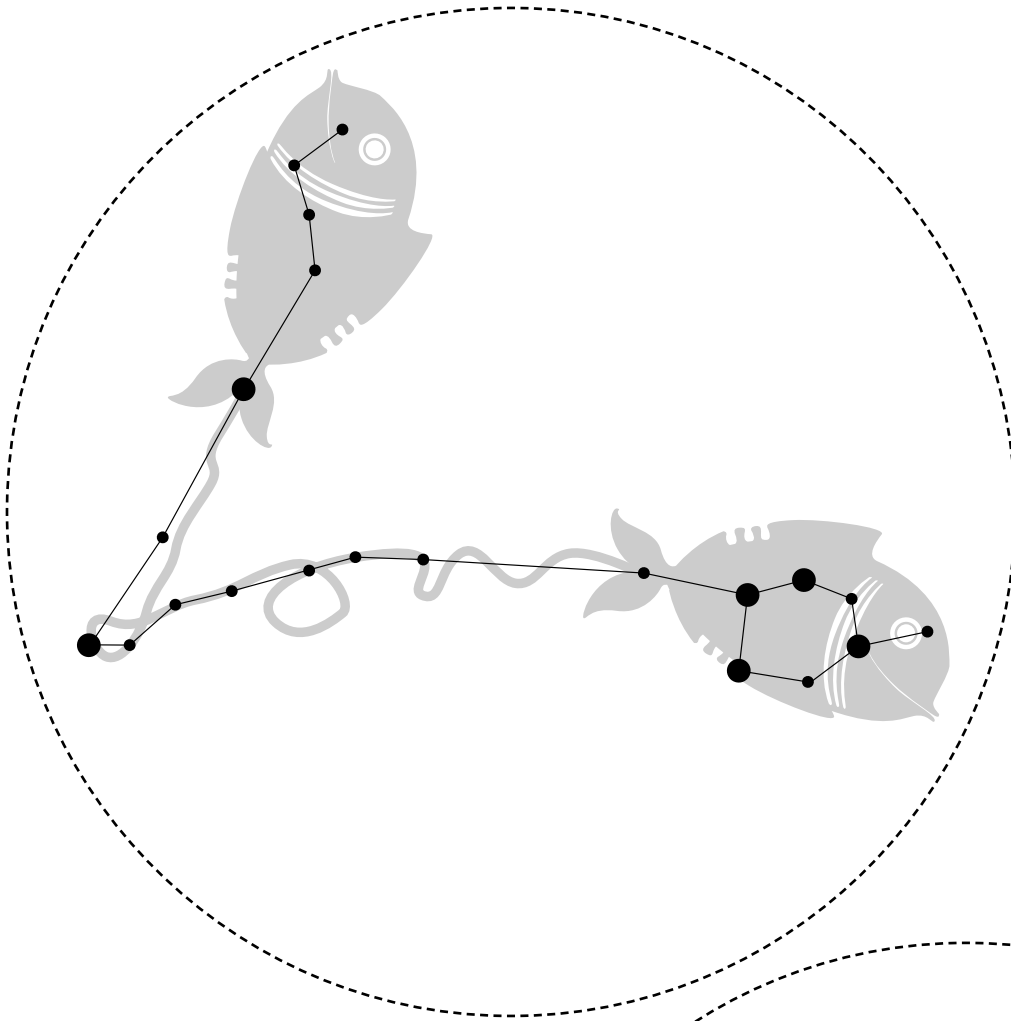

GEMINI

Gemini refers to the fraternal twins Pollux and Castor in the ancient Greek mythology. The sons of the queen of Sparta, Zeus placed them in the sky side-by-side when they died. The constellation is located in the Geminid meteor shower, which peaks in mid-December.

PISCES

Pisces, translated, means “the fishes.” An ancient Greek constellation, it comes from the story of Aphrodite and her son, Eros, being pursued by the monster Typhon. To escape, Aphrodite and Eros were transformed into fish by river nymphs. This is the 14th largest constellation today.

SCORPIUS

Scorpius, or “the scorpion,” was sent to battle Orion, a hunter in ancient Greek mythology. When the two killed each other, Zeus, the god of the sky, placed Orion in the winter sky and Scorpius in the summer sky, so as to separate them forever. Scorpius can be seen in the southern summer sky.
