

Everyone can participate in these puzzles, compare notes, and share solutions. *Enjoy!*

## Find Your Own Math Super Powers

Everyone has the potential to be a math super hero. It is time to celebrate your accomplishments and gain confidence for your future math adventures.

As you have seen in Family Math, there is much more to math than memorizing number facts, doing calculations quickly, and drawing shapes.

If you have been able to complete any of the Family Math activities this school year, you have already begun to use your math super powers.

It's time for you to soar on your own. Find opportunities to keep thinking and growing mathematically in the things you do and the places you go.

Here are some ideas. Use any or all of these ideas, adapting them to your family's interests. The possibilities are infinite.

- Talk about math.
- Make up a new game.
- Plan a trip or family outing.
- Solve puzzles and build things.
- Design your math super hero shield.
- Find math where you least expect it.
- Celebrate family member math successes.
- Tackle math challenges that help you grow.
- Dare to share your logic while problem-solving.
- Make sense of number facts by finding patterns.
